OF BLUETOOTH AVAILABLE IN
NAVIGATORS WITH SOFTWARE 0123)

NOTES

Bluetooth telephone compatibility with hands-free system MEDIA SYSTEM TOUCH / COLOR

General:

- / **Warning:** If you experience sporadic problems with the Bluetooth connection, restart the mobile device and try reconnecting it.
- / **Warning:** This system does not support downloading of images of contacts.
- / Once the link is established, the mobile phone may display different access request messages for the contacts manager and/or call log. If this type of request is not accepted, certain information may not be displayed or may be incomplete. We recommend ticking the “always” option for future reconnections, contacts manager access requests, etc.
- / Some devices display the different requests mentioned in the previous point, after each connection, which is why it is important that the user looks out for this type of message on their mobile phone.
- / Some informations such as: the operator name, battery statuses or coverage can vary slightly between what is displayed on the mobile and what is displayed on the radio/sat nav/instrument panel.
- / We recommend copying contacts from the SIM card to the phone memory in order to avoid incompatibilities in contacts manager downloads.
- / Some mobile phones transfer the call time incorrectly, depending on their date/time configuration (time zone/Daylight Saving Time/etc.) and on the level of Firmware they are running.
- / On some devices, if the incoming call is accepted from the mobile when it is connected to hands-free, the call switches to private mode (the audio is transferred from the car’s Bluetooth to the mobile phone). The audio can be switched back to the car’s hands-free manually from the radio/sat nav or from the mobile itself.
- / Some telephone exchanges use the ringtone set on the mobile phone to ring on hands-free (through the vehicle speakers). If the phone is on silent, the tones may not ring when calls are received. We recommend setting the ringtone to audible on the mobile.
- / **Warning:** The use of previous versions of mobile software can result in restricted operation or sporadic interruptions in Bluetooth connections. It is advisable to always update your mobile to the latest software version. For more information, visit your mobile phone manufacturer’s website.

BT Audio:

- / Some devices do not start to ring immediately after connecting to BT audio and selecting it as the active source; instead it is necessary to start it playing directly on the mobile or have the mobile’s player open during the connection. On some devices, it is also necessary to manually resume playing the BT audio after a call.
- / Even if audio play is compatible in BT Audio mode, certain functions such as rewind and fast forward, as well as the presentation of available information about the artist, title, album, song duration, etc. will be available according to the compatibility of the connected device.
- / Occasionally short interruptions in the BT audio have been detected due to poor BT reception or during contacts manager download. We recommend keeping the mobile within a short distance and clear of obstacles.
- / Some mobiles, when connected with BT audio and disconnected from the radio or sat nav, continue playing music through their own speaker.
- / On some devices there may be short interruptions in BT Audio when message notifications are received from other applications (WhatsApp, messages, Facebook, etc...)
- / BT audio tests have been performed with the default application of each phone manufacturer. SEAT guarantees the described behaviour with these applications only.
- / On some Windows Phone devices, it has been detected that the BT audio cuts out for short periods, due to the phone continuing to search for BT devices within range. We recommend that you exit the BT configuration on the mobile menu in order to prevent this behaviour.

Bluetooth telephone compatibility with hands-free system MEDIA SYSTEM PLUS / NAVI SYSTEM

General:

- / **Warning:** If you experience sporadic problems with the Bluetooth connection, restart the mobile device and try reconnecting it.
- / **Warning:** The compatibility of downloading of photos linked to contacts has been tested on contacts stored in the phone’s internal memory.
- / Once the link is established, the mobile phone may display different access request messages for the contacts manager and/or call log. If this type of request is not accepted, certain information may not be displayed or may be incomplete. We recommend ticking the “always” option for future reconnections, contacts manager access requests, etc.
- / Some devices display the different requests mentioned in the previous point, after each connection, which is why it is important that the user looks out for this type of message on their mobile phone.
- / We recommend copying contacts from the SIM card to the phone memory in order to avoid incompatibilities in contacts manager downloads.
- / Some mobile phones transfer the call time incorrectly, depending on their date/time configuration (time zone/Daylight Saving Time/etc.) and on the level of Firmware they are running.
- / On some devices, if the incoming call is accepted from the mobile when it is connected to hands-free, the call switches to private mode (the audio is transferred from the car’s Bluetooth to the mobile phone). The audio can be switched back to the car’s hands-free manually from the radio/sat nav or from the mobile itself.
- / Some telephone exchanges use the ringtone set on the mobile phone to ring on hands-free (through the vehicle speakers). If the phone is on silent, the tones may not ring when calls are received. We recommend setting the ringtone to audible on the mobile.
- / **Warning:** The use of previous versions of mobile software can result in restricted operation or sporadic interruptions in Bluetooth connections. It is advisable to always update your mobile to the latest software version. For more information, visit your mobile phone manufacturer’s website.

BT Audio:

- / Some devices do not start to ring immediately after connecting to BT audio and selecting it as the active source; instead it is necessary to start it playing directly on the mobile or have the mobile’s player open during the connection. On some devices, it is also necessary to manually resume playing the BT audio after a call.
- / Even if audio play is compatible in BT Audio mode, certain functions such as rewind and fast forward, as well as the presentation of available information about the artist, title, album, song duration, etc. will be available according to the compatibility of the connected device.

- / Some mobiles, when connected with BT audio and disconnected from the radio or sat nav, continue playing music through their own speaker.
- / On some devices there may be short interruptions in BT Audio when message notifications are received from other applications (WhatsApp, messages, Facebook, etc...)
- / BT audio tests have been performed with the default application of each phone manufacturer. SEAT guarantees the described behaviour with these applications only.

NOTES

Bluetooth telephone compatibility with hands-free system NAVI SYSTEM PLUS

General:

- / **Warning:** If you experience sporadic problems with the Bluetooth connection, restart the mobile device and try reconnecting it.
- / Once the link is established, the mobile phone may display different access request messages for the contacts manager and/or call log. If this type of request is not accepted, certain information may not be displayed or may be incomplete. We recommend ticking the “always” option for future reconnections, contacts manager access requests, etc.
- / Some devices display the different requests mentioned in the previous point, after each connection, which is why it is important that the user looks out for this type of message on their mobile phone.
- / We recommend copying contacts from the SIM card to the phone memory in order to avoid incompatibilities in contacts manager downloads.
- / Some mobile phones transfer the call time incorrectly, depending on their date/time configuration (time zone/Daylight Saving Time/etc.) and on the level of Firmware they are running.
- / On some devices, if the incoming call is accepted from the mobile when it is connected to hands-free, the call switches to private mode (the audio is transferred from the car’s Bluetooth to the mobile phone). The audio can be switched back to the car’s hands-free manually from the radio/sat nav or from the mobile itself.
- / When connecting to a new mobile phone, it is recommended that the BT device search should only be started from one of the devices (either the mobile phone or the radio). If the search is started from both sides at once, the devices that you want to connect may not be displayed.
- / Some telephone exchanges use the ringtone set on the mobile phone to ring on hands-free (through the vehicle speakers). If the phone is on silent, the tones may not ring when calls are received. We recommend setting the ringtone to audible on the mobile.
- / **Note:** Downloading photos linked to contacts is only possible from contacts stored in the phone’s internal memory.
- / **Warning:** The use of previous versions of mobile software can result in restricted operation or sporadic interruptions in Bluetooth connections. It is advisable to always update your mobile to the latest software version. For more information, visit your mobile phone manufacturer’s website.

BT Audio:

- / Some devices do not start to ring immediately after connecting to BT audio and selecting it as the active source; instead it is necessary to start it playing directly on the mobile or have the mobile’s player open during the connection. On some devices, it is also necessary to manually resume playing the BT audio after a call.
- / Even if audio play is compatible in BT Audio mode, certain functions such as rewind and fast forward, as well as the presentation of available information about the artist, title, album, song duration, etc. will be available according to the compatibility of the connected device.
- / Occasionally short interruptions in the BT audio have been detected due to poor BT reception or during contacts manager download. We recommend keeping the mobile within a short distance and clear of obstacles.
- / Some mobiles, when connected with BT audio and disconnected from the radio or sat nav, continue playing music through their own speaker.
- / On some devices there may be short interruptions in BT Audio when message notifications are received from other applications (WhatsApp, messages, Facebook, etc..)
- / BT audio tests have been performed with the default application of each phone manufacturer. SEAT guarantees the described behaviour with these applications only.

MirrorLink™:

- / To ensure correct compatibility it is recommended that BT audio (A2DP) should be disconnected before connecting to MirrorLink using USB.
- / Some devices with version 1.0 may have limitations and are not available while driving.
- / If you experience sporadic problems when connecting the phone to MirrorLink, try restarting it.
- / After ending a call using the MirrorLink device, it can take a few seconds to get back the audio that was previously playing.
- / When some mobile phones connected using MirrorLink are disconnected from the radio, they continue playing the music over their own loudspeaker.
- / For more information about the MirrorLink version installed on your phone, visit: (<http://www.mirrorlink.com/>)

SMS:

- / Some phones do not support messages with uncommon characters (emojicons or symbols).
- / The radio’s SMS function will only display short text messages (SMS). Multimedia messages, or messages with attached content (MMS) will not be displayed.
- / Some phones do not correctly order messages in SMS function folders (received, sent, deleted... etc.).
- / Messages containing contact information, sent using the navigator/GPS’s SMS function (“Messages/Send contact data”) will be displayed in text format. (vcard)

Notes Nokia:

- Some Nokia phones with S.O. S60 (3^a) or Symbian^ 3, in function of the Firmware version that they have, do not correctly transfer audio when making incoming or outgoing calls after reconnecting. Updating the mobile's Firmware to the latest status available from Nokia is recommended.
- On some NOKIA devices with S.O. Symbian (S40) will disconnect from the vehicle's BT when a call is changed from active to private mode. Once the call has finalized, Symbian automatically reconnects.
- On occasion, the correct functioning of the BT Audio controls (fast forward and rewind) depends on the music application used.
- With LUMIA mobiles it is not recommended to have the screen «Bluetooth Configuration» open while Bluetooth Audio is active.

Notes Nokia:

- Some Nokia phones running the S60 (3rd edition) or Symbian^ 3 OS, depending on which version of Firmware they carry, do not correctly transfer the audio when making/receiving calls after reconnections. We recommend updating the mobile's Firmware to the latest available Nokia release.
- Some NOKIA devices running the Symbian (S40) OS will be disconnected from the vehicle's BT when an active call is switched to private mode. Once the call has been ended, they reconnect automatically.

Notes Nokia:

- Some Nokia phones running the S60 (3rd edition) or Symbian^ 3 OS, depending on which version of Firmware they carry, do not correctly transfer the audio when making/receiving calls after reconnections. We recommend updating the mobile's Firmware to the latest available Nokia release.
- Some NOKIA devices running the Symbian (S40) OS will be disconnected from the vehicle's BT when an active call is switched to private mode. Once the call has been ended, they reconnect automatically.

Notes BlackBerry:

- If nothing happens when you try to re-import contacts manually, restart your phone by turning it off and on again.
- Mobiles installed with software holder than V7.1.X will request approval after each connection.
- Q and Z series models may become somewhat unstable when quickly fast-forwarding and rewinding BT Audio.

RM-980 X DS	✓	✗	✓	✓*	✓	✓	✗	✗	✓*	✓	✗	*It is duplicating contacts from the SIM *This device may have limited BT audio functionality	V1.2.4.1- (059T9D8)

Notes Nokia:

- Some Nokia phones with S.O. S60 (3rd) or Symbian^ 3, in function of the Firmware version that they have, do not correctly transfer audio when making incoming or outgoing calls after reconnecting. Updating the mobile's Firmware to the latest status available from Nokia is recommended.
- On some NOKIA devices with S.O. Symbian (S40) will disconnect from the vehicle's BT when a call is changed from active to private mode. Once the call has finalized, Symbian automatically reconnects.
- The Audio BT control (fast forward and rewind) may sometimes be completely inoperative.
- With LUMIA mobile phones, it is not recommended to select the «Bluetooth settings» screen when the Audio Bluetooth is enabled.

Notas sobre SAMSUNG:

- With some mobile phones, an SMS has to be accepted from the mobile phone before it is sent. Download the new software from the following link.
- The results of these lists for Bluetooth Audio Streaming only take into account functionality with the default SAMSUNG application.
- On some Samsung models with Android prior to KitKat (4.4.2), the song duration may not be displayed correctly.

Notes Nokia:

- Some Nokia phones running the S60 (3rd edition) or Symbian^ 3 OS, depending on which version of Firmware they carry, do not correctly transfer the audio when making/receiving calls after reconnections. We recommend updating the mobile's Firmware to the latest available Nokia release.
- Some NOKIA devices running the Symbian (S40) OS will be disconnected from the vehicle's BT when an active call is switched to private mode. Once the call has been ended, they reconnect automatically.
- Using the NOKIA music app on LUMIA devices can limit the correct operation of BT audio.
- With LUMIA mobiles it is not recommended to have the screen "Bluetooth Configuration" open while Bluetooth Audio is active.

Notes Nokia:

- Some Nokia phones running the S60 (3rd edition) or Symbian^ 3 OS, depending on which version of Firmware they carry, do not correctly transfer the audio when making/receiving calls after reconnections. We recommend updating the mobile's Firmware to the latest available Nokia release.

- Some NOKIA devices running the Symbian (S40) OS will be disconnected from the vehicle's BT when an active call is switched to private mode. Once the call has been ended, they reconnect automatically.

Notes about Sony Ericsson:

- Some Sony Ericsson mobiles do not display the time in accordance with the phone's configuration, but always as GMT+0. This can be corrected by configuring the time on the mobile so that neither GMT+x nor summer times are used.

BLUETOOTH® PHONES

Bluetooth telephone compatibility with hands-free system NAVI SYSTEM PLUS

Valid for satnavs with Software number: 0123 ó 0319 and higher, after having updated to the latest version of Bluetooth available.

Date of manufacture later than september 24th 2015

Notes on Nokia:

- Some Nokia phones with S.O. S60 (3rd) or Symbian^ 3, in function of the Firmware version that they have, do not correctly transfer audio when making incoming or outgoing calls after reconnecting. Updating the mobile's Firmware to the latest status available from Nokia is recommended.
- On occasion, the BT Audio controls (fast forward and rewind) do not work at all.
- With LUMIA mobiles it is not recommended to have the screen «Bluetooth Configuration» open while Bluetooth Audio is active.

Notes on SAMSUNG:

- On some mobiles, it is necessary to accept from the mobile, before sending an SMS.
- The results of these lists for Bluetooth Audio Streaming only take into account functionality with the default SAMSUNG application.
- On some Samsung models with Android prior to KitKat (4.4.2), the song duration may not be displayed correctly.

Notes on Sony:

- The results of these lists for Bluetooth Audio Streaming only take into account functionality with the default SONY application.

- (1) The call log is not showing date and hour.
- (2) It is not showing the last contact added in the contacts manager.
- (3) Incompatible. Unstable Bluetooth connection and mobile functionality.
- (4) It is duplicating contacts from the SIM.
- (5) It is not importing contacts from the SIM correctly.
- (6) Incompatible. Not possible to connect to Bluetooth.
- (7) We recommend you connect the Bluetooth Audio from the mobile.
- (8) It is not showing missed calls in the calls log.
- (9) We recommend initially linking and connecting BT audio from the mobile.
- (10) It is not automatically reconnecting profiles after disconnection.
- (11) Poor BT audio quality.
- (12) We recommend initially linking and connecting BT audio from the radio.
- (13) After calls, the mobile volume reduces to the minimum.
- (14) It does not PAUSE the BT audio correctly.
- (15) At times it can take a few seconds too long to end the call.
- (16) It is not correctly downloading contacts with photos.
- (17) Request for access to contacts at each connection.
- (18) The hands-free audio sound is low quality.
- (19) Only displays the song title. Does not display artist or album.
- (20) Asks for request on the mobile after every connection.
- (21) Displays the records of previously deleted calls on the mobile
- (22) We recommend you link the device from the mobile.
